

FOR APRA REGULATED ORGANISATIONS

ProductCloud's AI Governance module, powered by Aicura, provides the specialised AI governance capabilities that feed your existing risk and compliance processes.

In April 2026 APRA wrote to regulated entities setting out its expectations for managing AI-related risk, including an inventory of AI tooling and use cases, ownership across the AI lifecycle through to decommissioning, human involvement in high-risk decisions, visibility over the AI supply chain and assessments through the whole lifecycle. Aicura does that AI-specific work, and what it produces feeds the prudential processes your organisation already operates.

The register is the inventory

APRA's letter asks for an inventory of AI tooling and use cases with ownership across the lifecycle, and observed that systems are being deployed without one. Aicura registers every AI system and agent with an owner, tracks each through its lifecycle including decommissioning, and keeps the version history, so the inventory expectation is met by the same record the rest of the work builds on.

Assessed and documented

Every system gets a risk and impact assessment before it goes live and again as it changes, so the risks are understood while there is still time to act on them. Alongside the assessment, each system and agent carries a model card, the single document that describes what the system is, who provides it and what depends on it, ready whenever anyone needs to understand a system quickly.

Feeding your prudential processes

The risks and suggested controls that come out of each assessment push into your risk platform and are worked there, alongside everything else your organisation manages. When an assessment surfaces something another process should know about, a vendor for the provider register or a system a critical operation depends on, it lands with the process that owns it. Your teams keep working where they always have, and Aicura keeps them supplied.

Evidence for the conversation

Aicura's Evidence Vault seals what the platform produces, so each record can be proven unchanged from the moment it was created. Attestations sit alongside, cryptographically capturing the people standing behind each record. When a board, an auditor or a supervisor asks how AI is governed, an evidence pack assembles the relevant records, drawn from work that was done as it happened rather than pieced together for the occasion.

Everything in its place

ProductCloud's AI Governance module, powered by Aicura, sits alongside the systems you already run. ProductCloud manages the customer relationship while Aicura provides the specialist AI governance capabilities. The registers, assessments, model cards and evidence are delivered through ProductCloud while your existing risk, control and incident processes remain unchanged.

Why ProductCloud?

- Single platform for Product Management & AI Governance
- One commercial relationship
- Single Sign-On
- Integrated with ProductCloud workflows
